Introduction

Market Background

The blockchain is an incorruptible digital ledger of economic transactions that can be programmed to record not just financial transactions but virtually everything of value. Financial and technology industries alike are combining wonderfully, giving rise to the birth of blockchain outside of its normal working conditions. Blockchain is a distributed digital ledger designed to power and back cryptocurrencies.

Cryptocurrencies have been the top performing asset class over the last decade with its total market capitalization growing from around $1.7 Billion in 2013 to where it stands now at $ 1.7 Trillion. Recent months have witnessed global institutional investors - pension, hedge and endowment funds, which historically invest in diverse asset classes including stocks, commodities and real estate - invest in cryptocurrencies to diversify their investment portfolios and spread their risk.
